

REPORT FROM 4TH PROJECT MEETING IN BRNO, CZECH REPUBLIC THURSDAY 21TH APRIL 2022

On Thursday we explored sustainable transport in the city. All the student and teachers met at school at 9 a.m. and all the group started to the trolleybus depot in Komín in Brno. We visited and saw the place

where the trolleybuses are parked, repaired and regularly checked. The man explained to us how does the ecological transport works – the trolleybuses use electricity and they need a net of wires all over the city. However they are not noisy, do not produce any harmful substances and can carry a lot of people.

We saw trolleybuses form inside and outside and learned a lot of useful things.

We spent all the morning there and when we finished we returned to school for lunch in the school canteen. Another typical Czech meal.

The afternoon was a sports afternoon.

We played table tennis in the school corridor and football in the school pitch in the yard. It was another chance to talk to the student from other teams and learn more about each other.
